REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Independent claims 1 and 10 among other things teach the limitation "a method for constructing a revised cache layout of a media clip at each of a network distributed proxy server (NDPS) in accordance with a lazy caching approach and token exchange, the method comprising the steps of: receiving rank change information for said media clip from an origin server at said each NDPS; determining a revised cache layout responsive to the rank change information at said each NDPS; receiving a client request for at least one segment of said media clip at one of said each NDPS; returning said at least one requested segment from a cache associated with the one of said each NDPS in the case where a requested segment is stored therein; otherwise, initiating a token exchange with another NDPS that stores the requested segment, wherein the step of initiating a token exchange with another NDPS that caches the requested segment comprises sending a token from said one of said each NDPS to said another NDPS, wherein said token is adapted for: retaining said at least one segment of said media clip in said revised cache layout if said another NDPS possesses a local token for said at least one segment of said media clip; and replacing said at least one segment of said media clip with at least one other segment of at least one other media clip if said another NDPS does not possess said local token for said at least one segment of said media clip" in a network environment with at least one origin server and a plurality of network distributed proxy servers (NDPS) in communication with said at least one origin server, each NDPS including an associated cache.

Independent claim 7 among other things teach the limitation "a method for constructing a revised cache layout of a media clip at each of a network distributed proxy server (NDPS) in accordance with a lazy caching approach and token exchange, the method comprising the steps of: receiving rank change information for said media clip from an origin server at said each NDPS; determining a revised cache layout responsive to the rank change information at said each NDPS; receiving a client request for at least one segment of said media clip at one of said each NDPS; returning said at least one requested segment from a cache associated with the one of said each NDPS in the case where a requested segment is stored therein; otherwise, initiating a

token exchange with another NDPS that stores the requested segment, wherein the step of initiating a token exchange with another NDPS that caches the requested segment comprises sending a token from said one of said each NDPS to said another NDPS, wherein said token is adapted for: sending a segment request packet from said one of said each NDPS to said another NDPS with an associated token bit set to one for said requested segment; determining at said another NDPS whether a token associated with said requested segment is set or not set; rejecting said token exchange by said another NDPS in the case where it is determined that said token is set at said another NDPS; and accepting said token exchanging the case where it is determined that said token is not set as said another NDPS” in a network environment with at least one origin server and a plurality of network distributed proxy servers (NDPS) in communication with said at least one origin server, each NDPS including an associated cache.

The prior art does not teach the cited limitation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
